Abstract

The goal of this paper is to deduce argument sum rules from differential equations.

$$f'(z) = f''(z) \Rightarrow f(a+b) = \frac{f(a)(f(0)f(b) - f'(0)f'(b)) + f'(a)(f(0)f'(b) - f'(0)f(b))}{f(0)^2 - f'(0)^2}$$

$$(0.1)$$
